FORENSIC POLYGRAPH REPORT

Subject: Diana L. Taurasi

Date: January 18, 2011

Ms. Taurasi, was administered a forensic polygraph examination concerning the use of a drug called "Modafinil." According to Ms. Tanasi, she is a professional basketball player and was randomly drug tested while participating in a basketball game in Turkey. Ms. Tanasi stated that approximately 30 days after being drug tested, she was notified that she tested positive for Modafinil. Ms. Tanasi stated that she has never ingested this drug, and in fact, never heard the name before. I then asked her if she could have ingested a generic drug, and again she said, no.

It was explained to Ms. Taurasi, that the polygraph examination was going to be administered on a polygraph instrument used by law enforcement personnel. The polygraph protocol was discussed in detail, and she acknowledged that she understood my instructions.

After the pretest interview, the relevant questions were reviewed with Ms. Taurasi. The relevant questions asked during the polygraph examination were as follows:

- 1. Did you at any time take the drug Modafinil or any similar generic name brand drug?**

Answer: No

- 2. Did you lie to club management when you denied ever using the drug Modafinil or any similar generic name brand drug?**

Answer: No

- 3. Did you at any time take the drug Modafinil or any similar generic name brand drug?**

Answer: No

The polygraph examination was administered on a Lafayette Instrument LX 4000 Computerized Polygraph. Three polygraph charts were administered, and the polygraph charts were graded using the Backster Numerical Scoring System. The final call is NDI/No Deception Indicated.

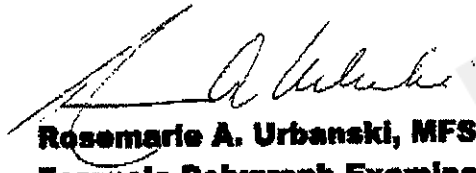

Rosemarie Urbanski, MFS, a forensic polygraph examiner, and a full member of the American Polygraph Association, has quality controlled the polygraph examination for accuracy, completeness and grading. Ms. Urbanski concluded after numerically scoring the polygraph charts, that Subject was truthful when she answered "no" to the above relevant questions.
